

2. Fold down each corner.
(Does not have to be perfect.)

1. Print this template.

Important

When printing, *do not* scale the page to fit in the printable area (e.g., "Fit to Page", "Shrink to Printable Area", etc.). Print the *actual size*. (Printing the actual size will cut off some of the lines at the edges. That is OK.)

3. Fold the left edge of the paper to the solid line at right and fold the right edge of the paper to the solid line at left. It doesn't matter which side overlaps which.

4. The horizontal dash-dot line above indicates where to fold the page next, but it will be hidden. Note roughly where that line is and fold the taller (bottom) section under the shorter (top) section.

5. Fold a majority of the excess at the top down toward you. Tuck it into the pocket formed by the left and right panels, and you're done!

Capacity

Up to 4 or 5 PocketMods
